Navigating this Document

For each identified process flow, this document includes the following information. *Refer to the Appendix for definitions and legends.*

Process Details: This document will include details about the business process group, business process, sub-process and tasks mapped as follows:

- Level 1 (L1): Business process group
- Level 2 (L2): Business processes
- Level 3 (L3): Business sub-processes
- Level 4 (L4): Tasks

Process Flow Diagrams and Task Attributes: This section will provide a process flow diagram depicting the tasks (L4) within a subprocess (L3). Each L4 task will list required attributes as applicable (e.g., L4 task description, taxonomy, system (SAP or Other Connected Systems), Screen or Fiori App ID etc.). These diagrams will cover each business scenario, customizations that impact the L4 tasks within the business process as well as integration with connected systems. The swim lanes will represent the different systems (e.g., VTrckS, Distributor). The Level 4 (L4) task attributes table will capture the job profile details (e.g., CDC users, awardee users).

Purpose of this Document

This document is designed for all users involved in or impacted by Provider Order Processing a business process within Provider Orders and Fulfillment. It is intended for business, functional, and IT process owners, as well as supporting internal and external teams. The document provides a comprehensive reference for business process design within relevant systems and serves as a key resource for training and onboarding purposes.

Key highlights of this document include:

- A high-level details of the process
- Detailed end to end business process flow including activities performed in S/4HANA and other connected systems.

L1: Provider Orders and Fulfillment

Process Details

Process Description	The CDC's provider orders and fulfillment process begins when healthcare providers/awardees submit vaccine orders through the designated system, which are then validated and processed. Approved orders trigger direct shipments from distribution centers to provider locations.
---------------------	--

L2: Provider Order Processing

--	--

Process Details

Process Description	Providers submit requests for vaccines through their Awardee's immunization information system or designated ordering portal, specifying quantities and types required to serve their patient populations. The order is validated by business validation rules. Once approved, the order is processed, and vaccines are shipped directly to the provider's facility, ensuring timely and secure delivery for patient care.
---------------------	--

Below is the list of L3 processes for Provider Order.

L4 Attributes

L4 Task	Attribute	Value
SO-010-010-010 Copy Existing Vaccine Order		
	Process Description	A user can create a vaccine order with reference to an existing vaccine order.
	Job Profile	• CDC User • Awardee User
	System	VTckS
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-020 Order Entry through EXiS		
	Process Description	A new provider order has been identified to be entered in EXis system by the provider.
	Job Profile	Awardee User
	System	EXis
	Screen	Custom
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-030 Order Entry through other system (API)		
	Process Description	The Awardee will create a new provider order including all necessary information. The order will be validated against the spend plan and business validation rules to enforce data quality, eligibility, budget, contract and attribute checks.
	Job Profile	• CDC User • Awardee User
	System	VTckS
	Screen	F3893 - Manage Sales Orders
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-040 Order Entry by Provider		
	Process Description	The provider will create a sales order that includes all the necessary information. The order will be validated against the spend plan and business validation rules to enforce data quality, eligibility, budget, contract and attribute checks.
	Job Profile	• CDC User • Provider User
	System	VTckS
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-050 Order Entry through Fiori by Awardees		
	Process Description	Orders are interfaced into VTckS via API. The order will be validated against the spend plan and business validation rules to enforce data quality, eligibility, budget, contract and attribute checks.
	Job Profile	N/A
	System	API
	Screen	Custom

L4 Task	Attribute	Value
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine
SO-010-010-060 Order Status updated to "On Hold"		
	Process Description	When a provider order has been determined to need being held, the order status is updated to On Hold.
	Job Profile	• CDC User • Awardee User
	System	VTckS
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-070 Order Business Rules Validation		
	Process Description	During order entry in SAP S/4HANA, the CDC applies business validation rules to ensure that each vaccine order complies with funding restrictions, inventory thresholds, and program guidelines. These rules typically verify that requested quantities do not exceed allowable limits, that providers are eligible and active, and that budgeted funds are available for the specific vaccine types being ordered. The system also checks for data completeness, proper fund assignments, and alignment with CDC purchasing contracts. If any rule is violated, the user receives an error or warning message, prompting correction before the order can proceed to approval and fulfillment.
	Job Profile	CDC User
	System	VTckS
	Screen	Not Applicable
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine
SO-010-010-080 No order is created		
	Process Description	An order hits a hard stop, and no order is created when fundamental validations fail (e.g., missing mandatory fields, unauthorized access, invalid NDC).
	System	VTckS
	Screen	Not Applicable
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine
SO-010-010-090 Awardee fixes data issues and resubmits		
	Process Description	Once an order has failed (hard stop error) the validation requirements, the data must be corrected. The order will be updated and saved.
	Job Profile	Awardee User
	System	VTckS
	Screen	F3893 - Manage Sales Orders
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-100 Order Created with "Approved by Awardee" Status		
	Process Description	Once an order has passed the validation process, the order is created with Awardee Approval Required Status.
	Job Profile	Awardee User

L4 Task	Attribute	Value
	System	VTckS
	Screen	F3893 - Manage Sales Orders
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine
SO-010-010-110 Order Created with "Rejected" Status		
	Process Description	Orders may have a "soft stop" and are created with a rejection/hold status. Examples of these may be budget exceeded, supporting documentation missing, attribute mismatch.
	Job Profile	• CDC User • Awardee User • Provider User
	System	VTckS
	Screen	• F3893 - Manage Sales Orders • Provider portal
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine
SO-010-010-120 Order cancelation Business Rules Validation		
	Process Description	The cancellation business rules will be triggered each time an order/line item is cancelled. This also covers what happens when an Approved order is canceled, like SPC, Budget and Spend plan
	Job Profile	• Awardee User • CDC User
	System	VTckS
	Screen	F3893 - Manage Sales Orders
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-130 Order Status is Updated to "Cancelled"		
	Process Description	When a rejected order has been determined to need cancellation, the order status is updated to Cancelled. No further action can be taken on this order.
	Job Profile	• CDC User • Awardee User
	System	VTckS
	Screen	F3893 - Manage Sales Orders
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-140 Business Rules Validation Batch Job		
	Process Description	A batch job is created to process business validation rules against orders with status Rejected. Once the order is validated by the batch job it can be automatically approved. The batch job only processes the orders that are within 60 days from the order creation date.
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine
SO-010-010-150 Order is created with "Approved" Status		
	Process Description	The order can be manually or automatically approved based on validation rules. Once the order has been approved, it is saved with Approved Status.

L4 Task	Attribute	Value
	Job Profile	Awardee User
	System	VTckS
	Screen	F3893 - Manage Sales Orders
	Degree Of Automation	Semi-Automated
	Brownfield Categorization	Reimagine
SO-010-010-160 Cancel Provider Order / Line Item		
	Process Description	User should be able to edit (cancel order/line item) on the Provider Order in the Order details section for General Data that's not completed or cancelled. The cancellation business rules will be triggered each time an order/line item is cancelled. This action immediately releases committed budget and the SPC allocation and updates order statuses. Before order approval, Awardees and CDC users can cancel any order or line item (direct ship or non-direct ship). After order approval, only CDC users can cancel direct ship line items, while Awardees can still cancel non-direct ship orders or line items. Notes: - If the status is Approved - Only Status Approved by Awardee or Cancelled and Rejection Reason can be changed. - If status is Approved by Awardee: Status Cancelled and Rejection Reason can be changed , Can Edit Category, Cannot Edit Priority, Cannot Edit Order Reason.
	Job Profile	CDC/Awardee
	System	VTckS
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-170 Print Vaccine Request		
	Process Description	Print Vaccine Request enables users to generate a standardized form of a vaccine order when required.
	Job Profile	- CDC User - Awardee User - Provider User
	System	VTckS
	Screen	F3893 - Manage Sales Orders
	Degree Of Automation	Manual
	Brownfield Categorization	Migrate
SO-010-010-180 Order details are sent to Distributors through EDI		
	Process Description	Order details are transmitted from VTckS to the distributor's system via Electronic Data Interchange (EDI), enabling real-time, automated sharing of order information. This integration streamlines the fulfillment process, ensures accurate data exchange, and allows the distributor to process, ship, and update order statuses efficiently back to VTckS.
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Migrate
SO-010-010-190 Receive the Confirmation from Distributor through EDI.		
	Process Description	Once the distributor receives the order details, a confirmation is sent back to VTckS through EDI.
	Job Profile	N/A

L4 Task	Attribute	Value
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Migrate
SO-010-010-200 Set backorder flag in order line in case there is no inventory available		
	Process Description	When there is no inventory available, the distributor sends the backorder flag at the order line item level, which gets updated in VTckS.
	System	VTckS
	Degree Of Automation	Automatic
	Brownfield Categorization	Migrate
SO-010-010-210 ASN Received in VTckS from Distributor		
	Process Description	After fulfilling the order, the distributor sends an Advance Shipping Notice (ASN) to VTckS, providing detailed shipment information such as contents, quantities, and delivery status. There is a scenario where CDC user can un-cancel an order, If the proper process is not followed and the Grantee cancels an Order or Line and the product is shipped out by the distributor then CDC will un-cancel the item to post the ASN, this will reduce the Budget/ SPC as a normal order line will. and inform the Grantee.
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Migrate
SO-010-010-220 Delivery and PGI automatically updated in VTckS		
	Process Description	Delivery and Post Goods Issue (PGI) statuses are automatically updated in VTckS upon receipt of shipment details, reflecting completed deliveries.
	Job Profile	N/A
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Migrate
SO-010-010-230 Customer Consignment Fill-up		
	Process Description	Once the NDC/Material is shipped to the provider, the customer consignment is filled up. This goods movement records the transfer of inventory into the provider's consignment stock, pre-populating Inventory on Hand (IoH) data. The updated IoH is then used when creating the IoH Supporting Document.
	Job Profile	N/A
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Migrate
SO-010-010-240 Order remains in "Approved" Status until it is fulfilled		
	Process Description	The order remains in "Approved" status until it is fully fulfilled by the distributor. This status indicates that the order has passed all necessary validations and approvals, but the fulfillment process (such as shipment and delivery) has not yet been completed. Once all items are shipped, the order status will transition to reflect fulfillment.
	Job Profile	N/A
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Migrate

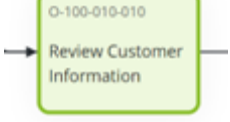

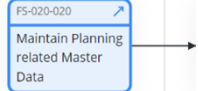

L4 Task	Attribute	Value
SO-010-010-250 Order status is updated to "Complete"		
	Process Description	The order status is updated to "Complete" once all items have been successfully fulfilled and delivered to the provider. This status change confirms that the order process is finished, with no outstanding actions remaining.
	Job Profile	N/A
	System	VTckS
	Degree Of Automation	Automated
	Brownfield Categorization	Migrate
SO-010-010-260 Search/List Provider Order		
	Process Description	The user should be able to search and list the provider orders using different fields such as Provider PIN, NDC Code, Provider Order Number... This step applies to all orders, not just those that are completed.
	Job Profile	CDC/Awardee
	System	VTckS
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-270 Display Provider Order		
	Process Description	User should be able to display the provider order to see all the details, such as the different partner functions (sold-to party, ship-to party..), the NDCs, the quantity ordered ... This step applies to all orders, not just those that are completed.
	Job Profile	CDC/Awardee
	System	VTckS
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-280 Get Shipment Details through API		
	Process Description	After shipment is completed, user should be able to get the shipment details through API.
	Job Profile	CDC/Awardee
	System	Vtrcks
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine
SO-010-010-290 Get Shipment details through EXiS		
	Process Description	Get shipment details through EXiS.
	Job Profile	CDC/Awardee
	System	VTckS
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine

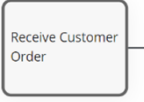

L4 Task	Attribute	Value
SO-010-010-300 Upload/Download History through EXiS		
	Process Description	User should be able to access upload and download history using EXiS. This is applicable to all EXiS Interfaces.
	Job Profile	CDC/Awardee
	System	Vtrcks
	Degree Of Automation	Manual
	Brownfield Categorization	Reimagine
SO-010-010-310 Get Status Run through API		
	Process Description	Allows awardees to retrieve the processing status of a submitted API request by calling the Status Service API. This applies to all API services.
	Job Profile	CDC/Awardee
	System	Vtrcks
	Degree Of Automation	Automated
	Brownfield Categorization	Reimagine

Appendix

Business Process Flow Legends

Process Component	Description/Definition	Example
Process Type / Process Type Map (Level 0, L0)	A collection of similar departments, functions, or business areas, or a set of process types and related process groups that define the enterprise for a particular industry/sector	Procurement
Process Group / Process Group Map (Level 1, L1)	A set of processes covering a single business area. Think “department”, or a set of a processes within a process group, usually under the ownership of one business process owner and aligning with a single function / business area	O – Order Processing
Process / Process Diagram (Level 2, L2)	A collection of subprocesses that meet a business objective. Think “primary responsibilities of the department”, or the first level of process decomposition that is comprised of subprocesses that depict a business objective	 O-100 – Process Standard Orders
Subprocess / Subprocess Diagram (Level 3, L3)	A grouping of related tasks that create an output in the business area. Think “tangible deliverable”, or the lowest level of process decomposition that is comprised of tasks that depict the role-based activities of the subprocess	 O-100-010 – Receive and Determine Customer Order Information
Task (Level 4, L4)	A specific or single-step activity within a subprocess. A task can be manual, or system supported. Think “key activities”	 O-100-010-010 – Review Customer Information
Attribute	Each object and model has the details known in IP as attributes that can be used to describe its purpose and document its traits (e.g. task definitions)	Business rules and policies
AND Rule	The AND Rule denotes when two or more sub processes or tasks are performed in parallel. All paths must be completed before the process can continue.	
XOR Rule	The XOR Rule is used in conditional routing when there is a choice between two or more paths and only one of those paths is performed.	
OR Rule	The OR Rule is used in conditional routing when there is a choice between two or more paths and some, but not all can be performed.	
DP Rule	The DP (Decision Point) rule is used when there are multiple choices or paths to choose from for subprocesses or tasks.	
Process Interface	Process Interface-Represents the integration touch points and is required to depict end-to-end processes.	

Process Component	Description/Definition	Example
Event	Event- Represents the output of a function that is required before the process can continue. Usually represents triggers or outcomes of decisions.
